INTRODUCTION

1ST INTERNATIONAL OIL AND GAS LICENSING ROUND IN UKRAINE

The State Geological Service of Ukraine released 30 onshore petroleum blocks for sale in online auctions at the public trading platform Prozorro.Sale. The total acreage of blocks is 4,630 sq. km.

The concession blocks will be auctioned in a series of licensing rounds. All parcels are located in proven petroleum provinces with well-developed midstream infrastructure and widely covered by geophysical surveys.

In the first round, announced on December 6, 2018, ten blocks were offered in five regions of Ukraine, covering over 1,810 sq. km. Licenses for nine of those promising blocks are proposed for exploration and production of hydrocarbons for a period of 20 years. The remaining parcel is for a 5-year exploration period.

The undiscovered prospective resources of ten blocks are officially estimated at 86.25 billion cubic meters of natural gas and 16.29 million tons of liquids. One block holds developed proven oil and gas reserves.

The initial price of most of the licenses is not exceeded USD 0.7 million. The company which submits the highest bid in terms of cash bonus will be awarded lease rights for a specific parcel.

There are also minimum exploration program requirements for each license, for instance: processing of legacy seismic data, conducting new seismic surveys and exploration drilling.

Bidders will have ninety calendar days to decide and submit their applications. The first online auction will take place on March 6, 2019.
Ukraine NOW

ROUND 1
Vatazhkivska block has a size of 181.8 km² and is located in Poltava district of Poltava region, 12 km south of the city of Poltava.

Combined license for geological exploration with pilot and commercial development, and production of hydrocarbons. Duration - 20 years.

East Poltava, Sukhodolivske, East-Reshetnyakivske, Reshetnyakivske, Mashivske, and Kopylivske hydrocarbons fields.
GEOLOGICAL CHARACTERISTICS

Vatazhkivska block belongs to the Mashivsko-Shebelynska gas province and the Rudenkivsko-Proletarske oil province. Vatazhkivska block in terms of tectonics is located in the central part of the Dnipro downthrown block. Surface of its basement is located above the northern slope of the Rudenkivsky nose. The thickness of the sedimentary mantle is 8000-10500 m. The Vatashkivska block consists of two accumulations with total area of 20.5 km².

SURVEY INFORMATION AVAILABLE

Assessment of hydrocarbon resources (Ukrainian classification)

Vatazhkivska block has 3,091 billion m³ of prospective gas resources of C3 category, sub-category 333. The petroleum prospects of Vatazhkivska structure are associated with the deposits of the Serpukhovian, Bashkirian and Moscovian stages. Productive horizons of the structure are estimated in the Middle and Lower Carboniferous deposits in a range of 3060 to 6300 meters.

Well data

Well No.404 has been drilled, indicating the gas in the core from the Middle Carboniferous sediments on productive horizons M-7 in the range of 5230 to 5237 meters and B-4 in a range of 5475 to 5480 meters.

Seismic surveys

Seismic surveys have been carried out by the state enterprise Ukrgeofizyka in 2003-2006 (46/03 team) and in 2010-2011 (31/10 team). The information about legacy surveys is noted below.

- **well**
- **gas-distribution plant**
- **gas pipeline**
- **DUBRIVSKO-RADCHENKIVSKA BLOCK**
GEOLOGICAL CHARACTERISTICS

Radchenkivske gas and oil field is limited to the arch of a large spur-shaped peak, located in the southern zone of the central graben of the Dnipro-Donets basin. Sediments of the Paleozoic, Mesozoic, and Cenozoic periods form the geological structure of the field.

West-Radchenkivske gas condensate field is an extensive western plunge of Radchenkivske high, located between the southern cut-off part with its central graben and is an integral part of Malosarochkyy-Radchenkivsky structural spur.

SURVEY INFORMATION AVAILABLE

The expired production license No. 1438 for the development of Radchenkivske gas and oil field was issued to JSC Ukrnafta in 1998 and terminated in 2011. The expired exploration license No. 1717 for development of West-Radchenkivske gas condensate field was issued to Evrokrym LLC and terminated in 2015.

Assessment of hydrocarbon resources (Ukrainian classification)

Total crude reserves of Radchenkivske gas and oil field of category A account for 1 423 thousand tons, including booked 14 thousand tons of sub-category 111. Crude reserves of the category C2 are 228 thousand tons, including booked 47 thousand tons of sub-category 122, and there is 74 thousand tons of non-appraised reserves of sub-category 332. Current reserves of associated gas of category A are 41 million m$^3$, including booked 1 million m$^3$ of sub-category 111. Associated gas reserves of category C2 are 7 million m$^3$, including booked 2 million m$^3$ of sub-category 122. The reserves have been approved by minute No. 2687 of the State Commission of Ukraine on Mineral Resources in 2012.

Current gas reserves of West-Radchenkivske gas condensate field are estimated at 14 million m$^3$ of category C1 (sub-category 221). Condensate reserves are 1 thousand tons of category C1 (sub-category 221). Prospective gas resources are 424 million m$^3$ of category C3 (sub-category 333). Reserves and resources have been approved by the minute No.1989 of the State Commission of Ukraine on Mineral Resources in 2010.

Well data

106 wells have been drilled in Radchenkivske gas and oil field – 11 appraisal wells, 62 exploration wells, and 33 production ones. 27 wells were non-productive. Depth of productive horizons ranges from 900 to 1600 meters. Current wells stock includes 3 suspended wells and 17 idle wells. The remaining wells are abandoned, including 29 for geological reasons, 6 for technical reasons, and 45 decommissioned. In 2002, Evrokrym LLC drilled one appraisal well No. 202 in West-Radchenkivske gas condensate field, which yielded 261.2 thousand m$^3$ of gas per day and a condensate of 19.4 m$^3$ per day from the B-26 deposit on the depth of 2902 to 2909 meters.

LICENSING PROCEDURE IN PROZORRO.SALE ONLINE SYSTEM

STAGE I
Announcement of the auction and opening of acceptance of applications

90 days

- The announcement is published by the State Geological Service of Ukraine on the official website (www.geo.gov.ua) and by state enterprise ProZorro.Sale online system on its website (www.zakupki.prom.ua).
- The auction data packages are posted on various electronic trading platforms, accredited by ProZorro.Sale – as the Ukrainian Energy Exchange (https://sale.ueex.com.ua).
- The trading platforms provide information publicly for free about the auction procedure and blocks.
- The description includes type of license, block location, reserves and resources evaluation, starting price of the bid, price of the geological data and auction documentation, which has to be paid only by the winner of the auction.

STAGE II
Closing of acceptance of applications

1 day

- The participant should be a resident company (Ukrainian legal entity) and is mandated to pay the guarantee fee at 20% of the starting price of the bid.
- Applicants have to submit an offer in one of electronic trading platforms, accredited by ProZorro.Sale. The names of the applicants are kept in the confidence till the end of the auction.

STAGE III
Conducting the auction and selection of the winner

8 days

- The auction procedure consists of one close and three open rounds. Everyone sees the results of close round only after all participants called out. A participant who gave the highest price has the right to make offer last in next open round.
- During the open rounds every participant has three minutes to make a decision one by one.
- A participant, who gave the lowest offer in previous round, has to make a decision first. A participant, who gave the highest offer in previous round, has to make a decision last.
- The participant with the highest price offer (cash bonus) wins the auction. If the winner refuses to pay, the participant that takes the second place in the auction is considered the winner.

STAGE IV
Protocol signing

30 days

- The auction protocol is signed by the winner, ProZorro.Sale, trading platform and the State Geological Service of Ukraine and further publishing online, while other participants have their guarantee fees returned.

STAGE V
Granting a license

- Within 30 business days after the auction, the winner signs an agreement with the State Geological Service of Ukraine, pays the difference between the guarantee fee and final offer, price of geological data and auction documentation.

Within 40 business days the winner has to contact the State Geological Service to obtain the license.

Source: Temporary procedure for the realization of an pilot project on the implementation of auctions for the sale of subsoil use special permits through electronic auctions”, approved by the Resolution of the Cabinet of Ministers of Ukraine No. 848 dated October 17, 2018.
Svitankovo-Lohivska block is located in the Chuhuiv, Zmiiv, and Kharkiv districts of Kharkiv region. The total area of the block is 197.49 km².

Combined license for geological exploration with pilot and commercial development, and production of hydrocarbons. Duration - 20 years.

Yulievske, Karavanivske, Bezlyudivske, Vasyzhivske, Denysivske, and Pivnichno-Korobochkynske hydrocarbons fields.
GEOLOGICAL CHARACTERISTICS

Svitankovo-Lohivska block belongs to the Yulivsko-Bezludivska structural and tectonic zone and it is located within the central part of the northern edge of the Dnipro-Donets basin. There are Khmarivska, Svitankova and Lohivska structures within the block, which have been explored in the past.

SURVEY INFORMATION AVAILABLE

The Khmarivska structure was discovered in 1980 in the Lower Carboniferous deposits on reflecting horizon Vв3-n. Exploration license No. 2826 for the Khmavrivsk structure belonged to JSC Plast from 2006 to 2016.

The Svitankova structure was discovered due to carried out seismic in 1981-2006 on Lower Carboniferous deposits. The Visean Stage and the weathering mantle of the crystalline basement are estimated as further exploration targets at the structure.

The Lohivska structure was discovered due to carried out seismic during 1981-2006 on the main reflecting horizon Vв3-n and is a restricted anticlinal fold, which is limited to the west and the north by the tectonic faults of amplitude 25-50 m.

Assessment of hydrocarbon resources (Ukrainian classification)

The prospective hydrocarbons resources at the Lohivska structure account for 42 thousand tons of oil and 950 million m³ of gas. The inferred gas resources of the Khmarivska structure of category D1 are estimated at 850 million m³. The Svitankova structure has prospective resources of the C3 category, estimated at 1.76 billion m³ of gas and 796 thousand tons of crude.

Well data

Exploration well No.7 was drilled in the Khmarivska structure in 2008-2009 and brought pure initial production.

DISPOSAL PROCEDURE OF STATE-OWNED INITIAL GEOLOGICAL DATA

STAGE I
Application to State Geological Service of Ukraine

- The applicant should apply directly to the State Geological Service of Ukraine (www.geo.gov.ua)
- The application includes the purpose of obtaining data, area or location of mineral deposits, identification of the data according to the Geological Catalogue (as if), form of provision of the data.

STAGE II
Draft service agreement for evaluation of the initial geological data for execution

- The State Geological Service of Ukraine checks the application and sends to the applicant a signed draft of agreement for the provision of services for the evaluation of the initial geological data.
- The applicant should sign the relevant agreement and send it back to the State Geological Service of Ukraine.

STAGE III
Sale and purchase agreement and invoice with the price of initial geological data

- The State Geological Service of Ukraine provides the applicant with a signed sale and purchase agreement and invoice with the price of geological data for execution.

STAGE IV
Payment for geological data

- The applicant executes the sale and purchase agreement and pays for the initial geological data.

STAGE V
Providing geological data

- Within 10 days after payment the initial geological data has to be provided to the applicant.

Pechenizko-Kochetkivska block is located within Kharkiv, Chuhuev, Vovchansk and Pechenizhsk districts of Kharkiv region. The area of the block is 262,73 km².

**LOCATION**

Pechenizko-Kochetkivska block is located within Kharkiv, Chuhuev, Vovchansk and Pechenizhsk districts of Kharkiv region. The area of the block is 262,73 km².

**CONCESSION TYPE**

Combined license for geological exploration with pilot and commercial development, and production of hydrocarbons. Duration - 20 years.

**DEPOSITS DISCOVERED IN THE AREA**

Yulievske, Karavanivske, Naryzhnianske, Skvortsivske, Ostroverkhivske, Bezlyudivske, Plativske, Bilohirsk and Korobochynske hydrocarbons fields.

GEOLOGICAL CHARACTERISTICS

The block is located within the central part of the northern edge of the Dnipro-Donets basin. The geological structure of the block includes Archean-Proterozoic rocks, Devonian saliferous rocks, Carboniferous and Permian formations of the Paleozoic, Triassic, Jurassic and Cretaceous deposits of the Mesozoic and Cenozoic.

SURVEY INFORMATION AVAILABLE

There are three structures, which have been explored within the block on the Lower and Middle Visean Stage of the Lower Carboniferous period: Pechenizka (C1v1), Kochetivska (C1v2) and Kytsivska (C1v2).

Assessment of hydrocarbon resources (Ukrainian classification)
Prospective resources of natural gas are accounted in Pechenizka structure in the amount of 1.83 billion m³.

Well data
There has been no oil and gas drilling in the block.

ENVIRONMENTAL IMPACT ASSESSMENT PROCEDURE

Within one year after obtaining the license the company is obliged to conduct an Environmental Impact Assessment (EIA). If this obligation is not met the license is annulled by the State Geological Service of Ukraine with no return of payed cash bonus.

**STAGE I**
Preparation of the notification of planned activity subject to EIA

- The applicant submits the notification to Environmental Department of respective Local State Administration of the Region or Ministry of Ecology and Natural Resources (hereinafter - state authority) in hard-copy and electronic form.
- The notification is published on the website of state authority and in the Common EIA Registry http://eia.menr.gov.ua

20 days

**STAGE II**
Comments and propositions to the notification

- State authority and community have the right to provide comments and make propositions on applicant’s planned activity.
- The applicant has the right to take into account comments and suggestions fully, partially, or reject them.

**STAGE III**
Preparation of the EIA report

- The applicant prepares EIA report and submits it to state authority in hard-copy and electronic form. The EIA report obligatory includes comments and propositions to the notification.
- Within 3 business days the state authority publishes the EIA report and Announcement of the beginning of public discussion.

35 days

**STAGE IV**
Public discussion of the project

- Public discussion is carried out in the form of public hearings and in the form of written comments and suggestions, provided by the community of the relevant territory.
- The state authority is responsible for carrying out public hearings. All the the costs related to the public hearings are paid by the applicant.

25 days

**STAGE V**
Granting of the EIA conclusion

- State authority analyses information obtained during public discussion and noted in the EIA report, and provides the applicant with the EIA conclusion free of charge within 25 business days from the day the public discussion is completed.
- The conclusion determines the admissibility or the inadmissibility of the planned activity.

Saltivska block is located in Vovchansk and Kharkiv districts of Kharkiv region, 27 km from the city of Kharkiv. The area of the block is 26.16 km².

Combined license for geological exploration with pilot and commercial development, and production of hydrocarbons. Duration - 20 years.

Bezlyudivske, Vasyzhivske, Pivnichno-Korobochkynske, Skvortsivske and Yuliivske hydrocarbons fields.

Map of Saltivska block
GEOLOGICAL CHARACTERISTICS

Saltivska block is located within the central part of the northern edge of the Dnipro-Donets basin. The production from the neighboring fields in operation is associated with the deposits of Middle and Lower Carboniferous and the Precambrian crystalline basement rocks. The Saltivska structure is an anticlinal fold of the northeast strike, developed over a horseshoe-shaped tectonic block of the basement, limited by faults with amplitudes from 20 to 100 meters.

SURVEY INFORMATION AVAILABLE

Gravimetric surveys in the area of Saltivska block were conducted during 1988-2011. Seismic surveys were carried out in 2005-2011, which discovered the geological structure on the reflecting horizon VB2-n in the Lower and Middle Carboniferous and Upper Jurassic deposits.

Assessment of hydrocarbon resources (Ukrainian classification)
Prospective gas resources are estimated at 5.33 million m$^3$ of C3 category.

Seismic surveys
294.2 km of seismic lines have been carried out for exploring the area in close vicinity of the block.

Well data
Test drilling of the Molodovska-663 well identified the gas in the Visean and Serpukhovian deposits of the Lower Carboniferous and diluted rocks of the basement in the range of 1000 to 1350 meters.

EXPLORATION WORK PROGRAM
REQUIREMENTS

Stage I (12 months) - processing and reinterpretation of 2D seismic data

Stage II (12 months) – acquisition of 2D or 3D seismic data on 1/4 of the block’s area

GEOLOGICAL CHARACTERISTICS

Production horizons are expected in the deposits of the Lower Permian, Upper Carboniferous and Moscovian Stage of the Middle Carboniferous period in the range of 3400 to 5800 meters.

Reservoir rock of the Mykytivska and Slavic suits are predominantly limestones and dolomites. Slavic suite gas is mainly associated with carbonate reservoir rock. The porosity varies from 6.0% to 19.0%. The saturation of gas varies widely from 60% to 95%.

Reservoir rocks of the Cartamysht suite of the Lower Permian and the Araucarite suite of the Upper Carboniferous are represented by irregular beds of sandstones and siltstones separated by layers of clay. The effective thickness of gas-saturated layers varies from 0.6 to 10.0-20.0 meters. The porosity of reservoir layers varies from 12.0% to 18.0%, the saturation of gas varies from 45-50% to 80-85%.

SURVEY INFORMATION AVAILABLE

Assessment of hydrocarbon resources (Ukrainian classification)
Prospective resources of hydrocarbons are 80.478 million tons of oil equivalent, including 62.158 billion m³ of natural gas, 14.6 million tons of crude oil, and 3.72 million tons of gas condensate.

Within the block a considerable volume of geological surveys have been carried out, due to the exploration of the geological structure of the south-eastern part of the Dnipro-Donets basin.

Well data
There has been no drilling in the block.

GEOLOGICAL CHARACTERISTICS

Pivdenno-Kobzivska block is located in the central zone of the Dnipro-Donets basin, within the Rudenkovsko-Proletarsky petroleum region.

SURVEY INFORMATION AVAILABLE

The block borders on the Rosumivske field, which produces commercial gas from the Middle Carbonaceous (M-1, B-12 horizons) and Upper Serypukhovian (C-4 horizon) deposits. In the Oktyabrska concession, which borders the Pivdenno-Kobzivska block to the northwest, six wells have been drilled at a depth of 3000 meters, and discovered the section of the Lower Permian, Upper Carboniferous, part of the Moscovian Stage.

Assessment of hydrocarbon resources (Ukrainian classification)
The block is located within two promising zones with a density of undiscovered prospective and interfered resources of the C3 and D categories estimated from 20–30 thousand tons per km² and up to 30–50 thousand tons per km², respectively.

Well data
There has been no drilling in the block.

GEOLOGICAL CHARACTERISTICS

The block is located within the Bilche-Volytska zone of the PreCarpathian Foreland. Dykhtynetska high is a large brachyanticline of Carpathian strike. The sides of the structure are almost symmetrical. The angle of the dip of the north-eastern side is 10 °, while the north-west is 8 °. The Dichtynetska structure is divided by longitudinal faults into separate blocks. The amplitude of these faults varies from 50-200 meters.

There is a number of promising petroleum accumulations near the block. The south-western periclinal of the Khotkevitska structure locates in the northwest direction from the Dykhtynetska high. Yablunytsia anticline was discovered near the settlement Yablunytsia. Usterikske high is located in a north-eastern direction from Dykhtynetska brachyanticline.

Appraisal well No. 1-Ploska on the neighboring Putyla block fount the gas on the depth of 2491 meters. Hydrocarbons content in the produced gas in the Paleogene sediments reached 25-50%, and in Cretaceous sediments 80-100%. The gas deposits are associated with the sandstone layers in the autochthonous deposits of the Paleogene and Cretaceous.

SURVEY INFORMATION AVAILABLE

Assessment of hydrocarbon resources (Ukrainian classification)
The block is located in a promising petroleum region with a density of undiscovered prospective and inferred hydrocarbon resources estimated to be from 30 to 50 thousand tons per km².

Well data
There has been no drilling in the block.

1982 year of the report
Zakhidnotokarsko-Krasnianska block is located in Svatove district of Luhansk region, 2 km west of Svatove district center. The area of the block is 91.06 km².

Combined license for geological exploration with pilot and commercial development, and production of hydrocarbons. Duration - 20 years.

Druzhelyubivske and Zaytsevské hydrocarbons fields.
GEOLOGICAL CHARACTERISTICS

The block covers the area of the northern edge and the cut-off part of the Dnipro-Donets basin. The edge of these structural and tectonic elements is the northern fault. To the south of the edge faulting, the crystalline basement gradually submerges to the centre of the depression in the system of faults of the northwest strike. Depth of the basement bedding is 2.5-3.2 km.

SURVEY INFORMATION AVAILABLE

The number of structures within Zakhidnotokarsko-Krasnianska block was discovered in the Upper Visean Stage due to the performance of the seismic by the state enterprise Ukrgeofizyka during 1980-1982. The traprocks of oil and gas accumulation in the structure in the Moscovian Stage are observed on the horizons M-2, M-3, M-5, M-6; in the Bashkirian Stage they are discovered on the horizons B-2, B-3, B-4.

Assessment of hydrocarbon resources (Ukrainian classification)

The inferred natural gas resources are estimated at 900 million m³.

Well data

The geological structure of Zakhidnotokarsko-Krasnianska block includes rocks of the crystalline basement, which are discovered by the extension wells Kolomykhichinska-1, Nezhurinska-1 and Nezhurinska-2, at depths, respectively, 2418 m, 2463 m, 3150 m, and are represented by breccia and cracked granite gneisses.

EXPLORATION WORK PROGRAM REQUIREMENTS

Stage I (12 months) - processing and reinterpretation of 2D seismic data

Stage II (12 months) – acquisition of 2D or 3D seismic data on 1/4 of the block’s area

Stage III (24 months) – one productive well drilling

ZAKHIDNOTOKARSKO-KRASNIAŃSKA BLOCK

45860 report number

Рогов А.М. author of the report

1982 year of the report
Suvorivska block is located in Reni, Izmail and Bolhrad districts of Odesa region. The area of the block is 462.95 km².

License for geological exploration with pilot development of hydrocarbons. Duration - 5 years.

On the northwest of the city of Reni, on the territory of Moldova is located Valenske oil field in the deposits of the Middle Sarmatian Stage.
GEOLOGICAL CHARACTERISTICS

Suvorivska block belongs to the south-western edge of the Moldavian Jurassic depression. In the geological structure of the sedimentary cover, in addition to the Vendian formations, deposits of the Triassic, Jurassic, Paleogene and Neogene periods are also presented. The deposits of the Jurassic and Triassic period on the depths of 2000 - 4500 meters are exploration target on Suvorivska block.

SURVEY INFORMATION AVAILABLE

Gravity and magnetics, geological mapping of scale 1: 200,000 and 1:50 000 have been carried out at different times on the area of the block and in the vicinity. In the southwestern part of Odesa region, oil and gas prospecting structures have been discovered by seismic exploration in sedimentation masses: Loshynivska, Izmailska, Utkonosivska, Kyslytska, Kamyshevskaya and others. Drilling operations have been carried out on the territory of the block in 1967-1972 in order to identify the geological conditions for the underground gas storage construction. Upper Jurassic deposits were the objects of investigation.

Assessment of hydrocarbon resources: not estimated

Seismic surveys
Seismic surveys have been carried out on the eastern part of Suvorivska block in 1982-1984. The results of the work are set out in a series of reports. In particular, in the report of the Safianivska seismic crew No. 244/84 as of 1985. It was concluded that a number of discovered structures, including the Loshynivske high in Jurassic sediments, could be drilled.

Well data
There has been no oil and gas drilling in the block.

EXPLORATION WORK PROGRAM REQUIREMENTS

Stage I (12 months) - processing and reinterpretation of 2D seismic data

Stage II (12 months) – acquisition of 2D or 3D seismic data on 1/4 of the block’s area

Stage III (24 months) – one productive well drilling
